

Prepping Your Data For AI

The SOLACE workflow is a consulting and software service that unites data from multiple projects under a single, auditable standard. SOLACE is part of Minerva's TERRA Mining AI Suite.

WE HELP YOU

HARMONIZE POORLY STRUCTURED OR LEGACY DATA

Project data is often arrayed in databases that are not interoperable, hindering the exploitation of legacy data

WE PROVIDE

CLEANED AND STANDARDIZED OUTPUTS

The SOLACE workflow enables organizations to create and curate standards and design self-improving workflows to align current and future datasets

OUR METHOD

CUSTOMIZED VOCABULARIES AND RULES

Vocabularies are managed and data is transformed as the system learns to fix typos, alternative labels, and legacy codes

WHY US

"OVER 80% OF THE TIME SPENT IN AI PROJECTS IS SPENT DEALING WITH AND WRANGLING DATA." 2019 Report by Cognilytica

Whether the preparation is for our AI solution or yours, this critical step is required to avoid the "garbage in, garbage out" problem with AI projects. Data cleaning and preparation is often the least desired, most labor-intensive task of data scientists, and using the SOLACE workflow allows your team to spend their valuable time on the big picture tasks instead.

SOLACE

ACE, TERRA's web application showing a custom user-defined taxonomy

SOLUTIONS WITHIN THE WORKFLOW

ACE

ACE is a software application developed for domain experts to define their terms using attributes. ACE then it infers their taxonomy automatically. This process keeps vocabularies clean, transparent, and logically consistent.

DBCONVERTER

DBConverter is a product that pulls in raw data and aligns terms to the chosen standard. It remembers historic mappings, making each alignment easier, and can convert final outputs to relational or linked data formats.

WHO WE ARE

MINERVA INTELLIGENCE INC is an artificial intelligence company building explainable evidence-based decision-making technologies. We enhance machine intelligence with human intelligence to reach conclusions faster than possible with humans alone.
